- The hair dryer should be installed in places where it will not come into contact with water when the bath or shower is in use. This is necessary also when the handle of the dryer is extended.
- •When the hair dryer is used in a bathroom, unplug it after use since the proximity of water presents a hazard even when the hair dryer is switched off.
- For additional protection, the installation of a residual current device (RCD) having a rated residual operating current not exceeding 30 mA is advisable in the electrical circuit supplying the bathroom. Ask your installer for advice.
- Do not use the dryer with wet hands or in the bath or shower. Do not use this hair dryer near water contained in bath-tubs, basins or other vessels. Do not leave or store the dryer near a tub, sink or other place where it will be exposed to water and other liquids or high humidity.

Do not use the dryer in a bath or shower.

WARNING: This symbol on the hair dryer means "Do not use this hair dryer near water". Do not use this hair dryer near bathtubs, showers, basins or other vessels containing water.

• Do not use thinner, benzine or other solvents when cleaning the dryer.

- Be careful that hair is not sucked into the air inlet during use. Never insert foreign objects into the air inlet or outlet. Mechanical damage or shock can result. If the air inlet or outlet is blocked during use, the heater block or dryer may not operate. After removing the blockage from the air inlet or outlet, wait several minutes and the hair dryer should operate again. If not, please contact an authorized Panasonic service center.

 Maintenance of air outlet and air inlet (once a month or more)

- To clean the air outlet, set the main switch to "1", and rake out with a brush while cool air is blowing out.
- To clean the air inlet, set the main switch to "0" and, with the airflow stopped, remove dust and hairs using a brush or vacuum cleaner.

- •Be careful since dust may spray out.
- When dust clogs the mesh, the thermostat switch will operate, frequently switching to cool airflow and reducing the drying/set performance.
- The thermostat switch is a protective device. Sparks may be seen during operation but these do not present any danger.
